Senior Java developer

London

£75,000 - £85,000

We are currently working closely with a rapidly evolving company with 60+ employees developing an artificial intelligence platform for their clients are expanding their London office and are looking for a Senior Java Developer to work on some exciting new projects! Daily complex challenges that you will be facing include using machine learning techniques and AI to work alongside their Data Science team. Project work is mostly greenfield with clients including the Guardian and Vogue. Development is strongly focused on building microservices and Machine Learning/AI tools.

They are looking for a Senior Java Developer - AI Platform with the following:

- Senior Java development experience
- Experience building microservices
- A strong DevOps mindset: Docker, Kubernetes experience
- Someone enthusiastic to learn and work with AI and Machine Learning tools in a challenging environment!

The role will suit an enthusiastic Senior Java Developer who is comfortable putting forward your own opinions about best practice solutions and working in cross-functional tech teams. If you are a Senior Java Developer who loves solving complex challenges for real-world business problems then this is a fantastic opportunity for you to progress your career! Tailored career progression pathways that suit you are intrinsic to this company's roadmap for your success.

Benefits:

- Collaborative and flexible working culture
- Clear career progression pathways (hands-on & hands-off) depending on how you wish to further your career
- Working with forward-thinking individuals with an avid interest in developments across AI and Machine Learning

Apply now for immediate consideration regarding this excellent Senior Java Developer opportunity, or feel free to get in touch via jobs@imperialrecuits.com for more information.
